

Better decisions drive better results

Are you getting the most value from your data?

While it's true you can't measure what you can't see, many organizations are making great improvements in leveraging business information. They understand the need for transparency throughout their HR practices, and that only when you can see all the many moving parts can you establish realistic expectations for better decision making.

The problems arise in bridging the gap between collecting the data and knowing what to do with it. Knowing the questions to ask and what kind of information to collect that will give you the power to transform data into actionable insight. The kind of data that truly enables workforce planning across all labor types.

With the release of Peopleclick's Business Intelligence Platform, you'll gain a complete picture of your entire staffing and recruiting process, acquire the tools and techniques to gain knowledge, and be able to translate that knowledge into better business results.

Ultimately, you will drive not only operational excellence in your staffing process, but also enable your recruiting teams to play a more strategic, consultative role in the business—to be key players in the decisions that drive better results.

Introducing the **Business Intelligence Platform** from **Peopleclick**

Industry-leading analytics that give you
the power to see and the knowledge to act.

feature details

the Business Intelligence Platform

enables

Workforce Planning Better decision making Better results

Key Capabilities

Transparency Across All Labor Types

The only solution that lets you see all your data, enterprise-wide, across all labor types. This visibility enables workforce planning and true business intelligence.

Branding Capabilities

Innovative techniques for dashboards and data visualization. Techniques designed to make information more relevant and engaging.

Powerful Dashboards

Make your dashboards more visual, providing immediate context, and dynamically generating images and alerts based on a pre-populated formula library. This capability is unique in the industry.

Report Scheduling and Distribution

Flexible scheduling options and scheduling instances let you keep all stakeholders informed, presenting data in ways most relevant to them. Reports can be sent automatically via email or as a link.

100% Web-based Authoring and Viewing

WebIntelligence provides full-client authoring. Increased on-report interactivity, including on-the-fly sort, filter and format.

New Content Management Tools

Reports can be organized in folders for ease of use. New document upload features for admin users.

Call us to see a demonstration of the Business Intelligence Platform and learn more about how this important new offering will help you make strategic decisions that drive better results—across all labor types.
